

Superstore

EDA Project

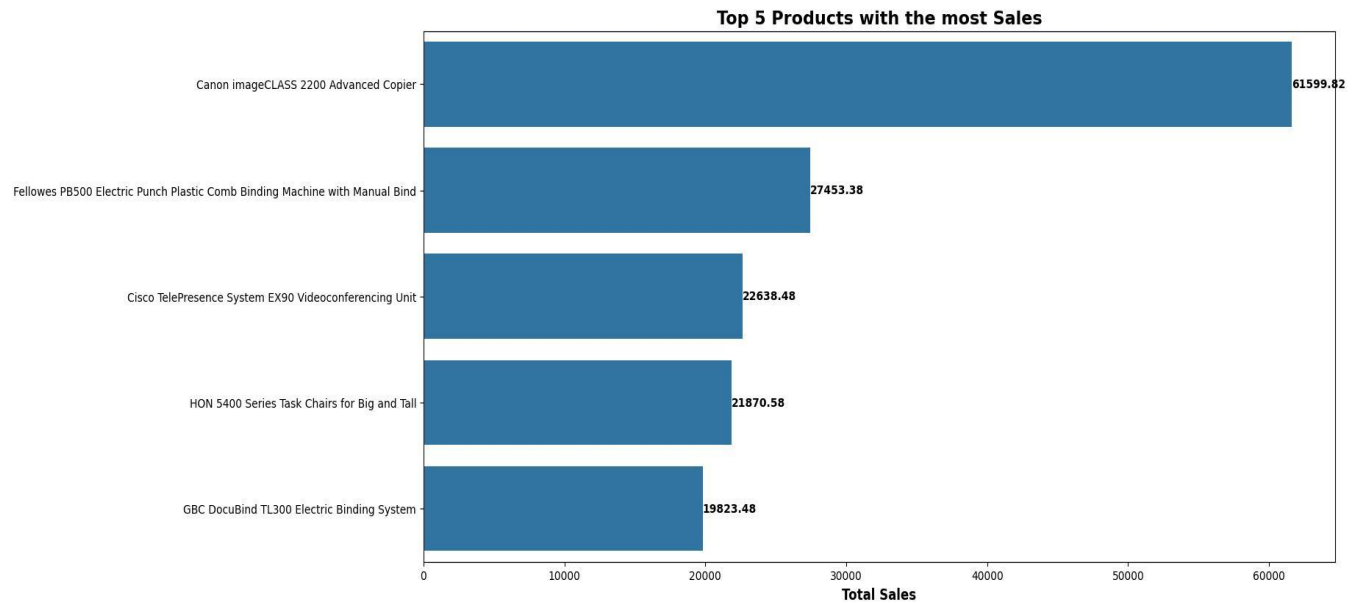

Name – Kaif Riyaz Moosa

Date – 07/05/2026

OBJECTIVES :-

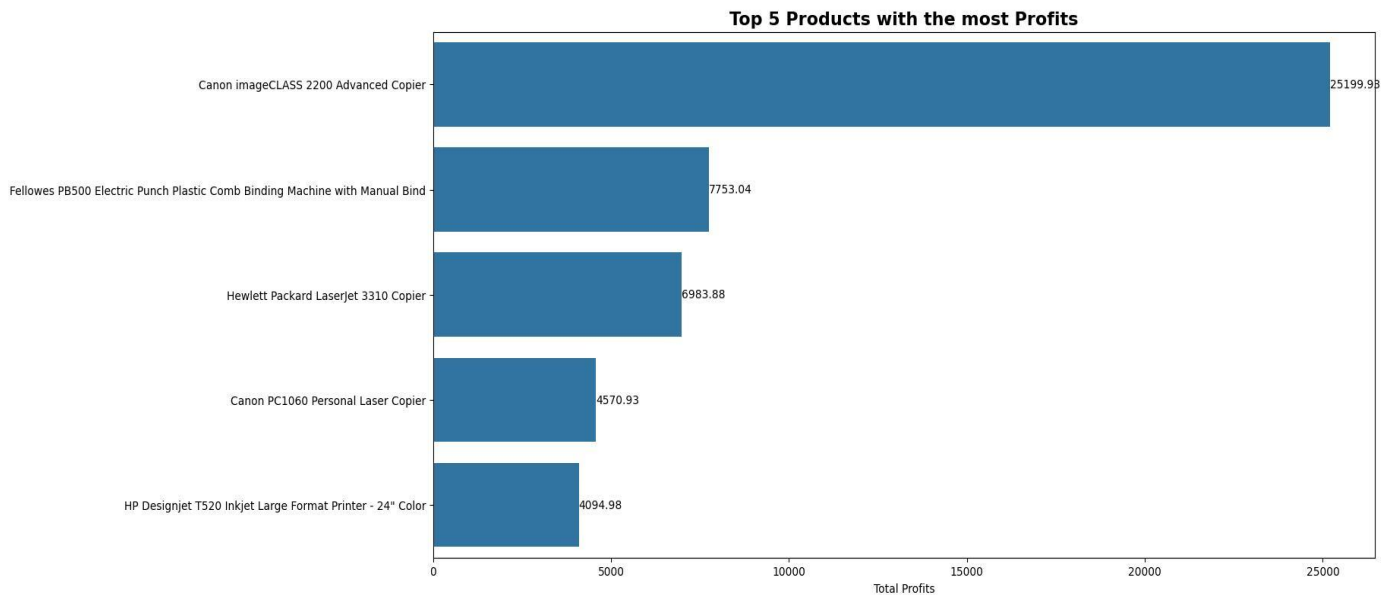

- ❖ To analyze overall sales performance of the superstore over time
- ❖ To identify top-performing products based on sales and profit
- ❖ To study sales distribution across different categories
- ❖ To analyze sales performance across regions and cities
- ❖ To understand customer contribution to total sales
- ❖ To examine relationships between variables using correlation analysis
- ❖ To present insights using data visualization techniques

❖ TOTAL SALES BY PRODUCTS :-

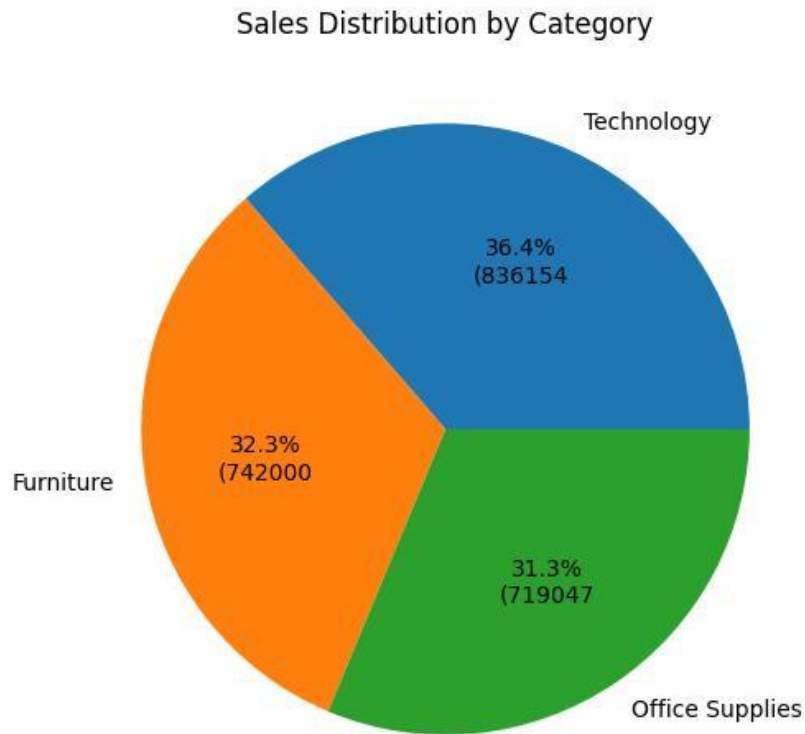

- Here top 5 products who were able to make the most sales in the superstore are listed.
- The canon imageclass product was the best selling product , while a very clear cap is seen when compared with the rest of products indicating its popularity in the market.

❖ TOTAL PROFITS MADE FROM THE PRODUCTS :-

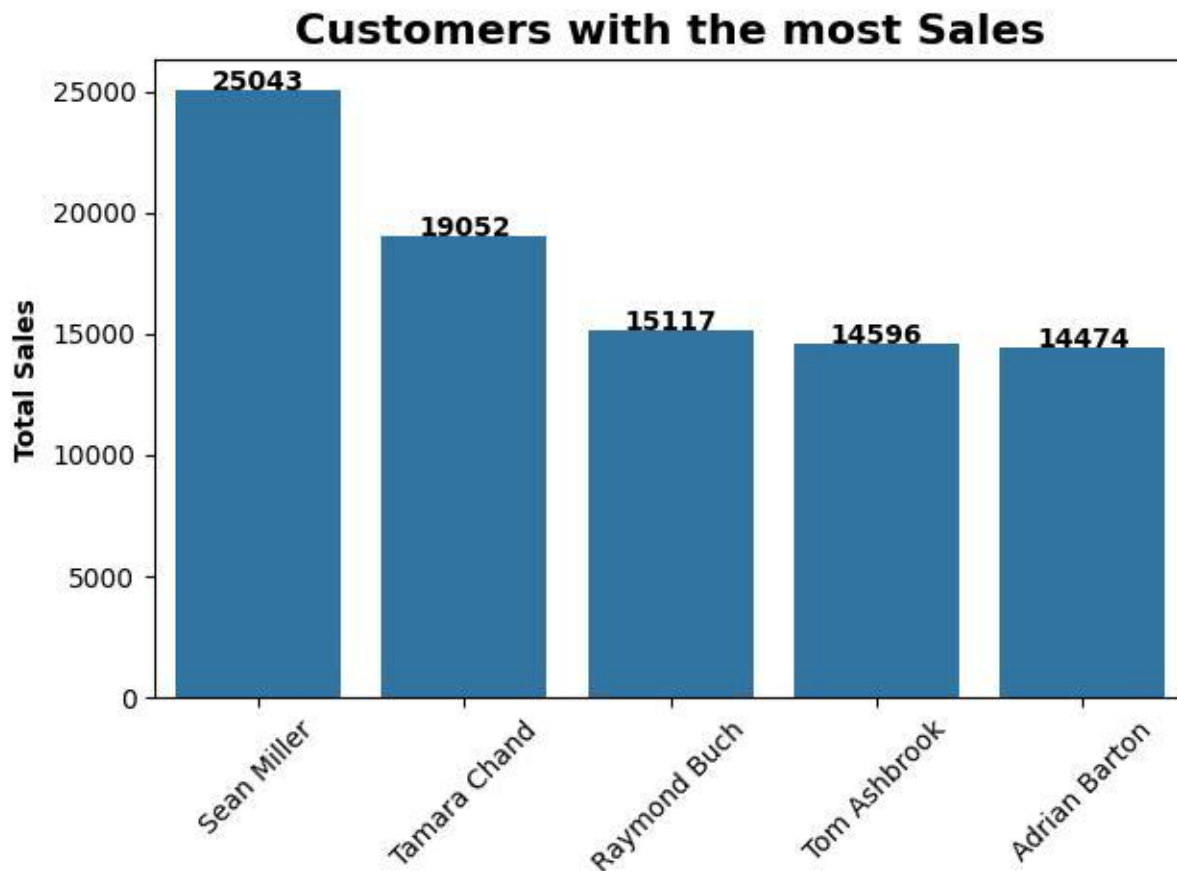

- Here top 5 products who were able to generate the most profits for the superstore are listed.
- Similar to the sales graph here also the canon imageclass product is leading but after the top two products there a difference can be seen between the sales and profit graph, indicating even though some products were able to make more sales they couldn't generate the profits due to low profit margins.

❖ TOTAL SALES BY CATEGORY :-

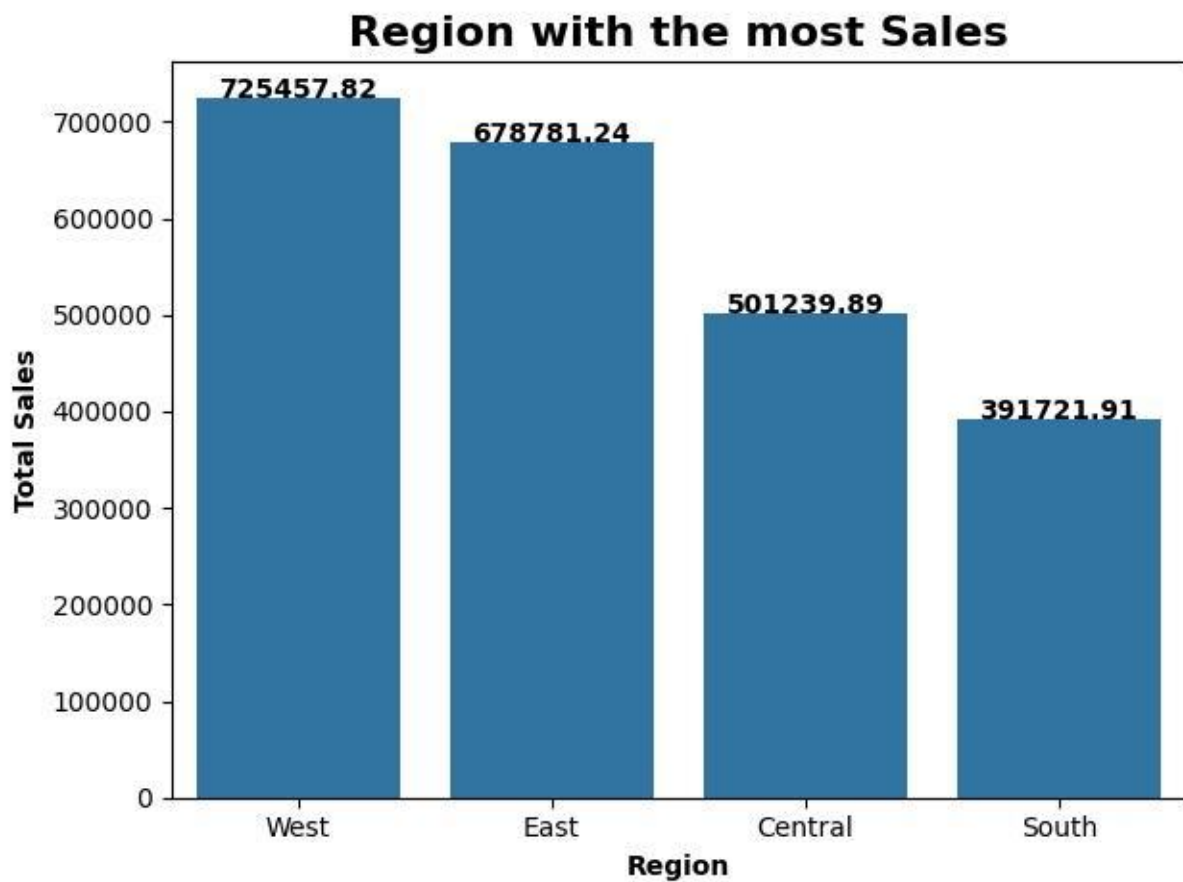

- Here the total sales generated on the basis of categories are listed.
- The products under technology category were able to generate more sales, while there isn't a very big gap for the remaining categories of product.

❖ TOP 5 CUSTOMERS WITH THE MOST SALES :-

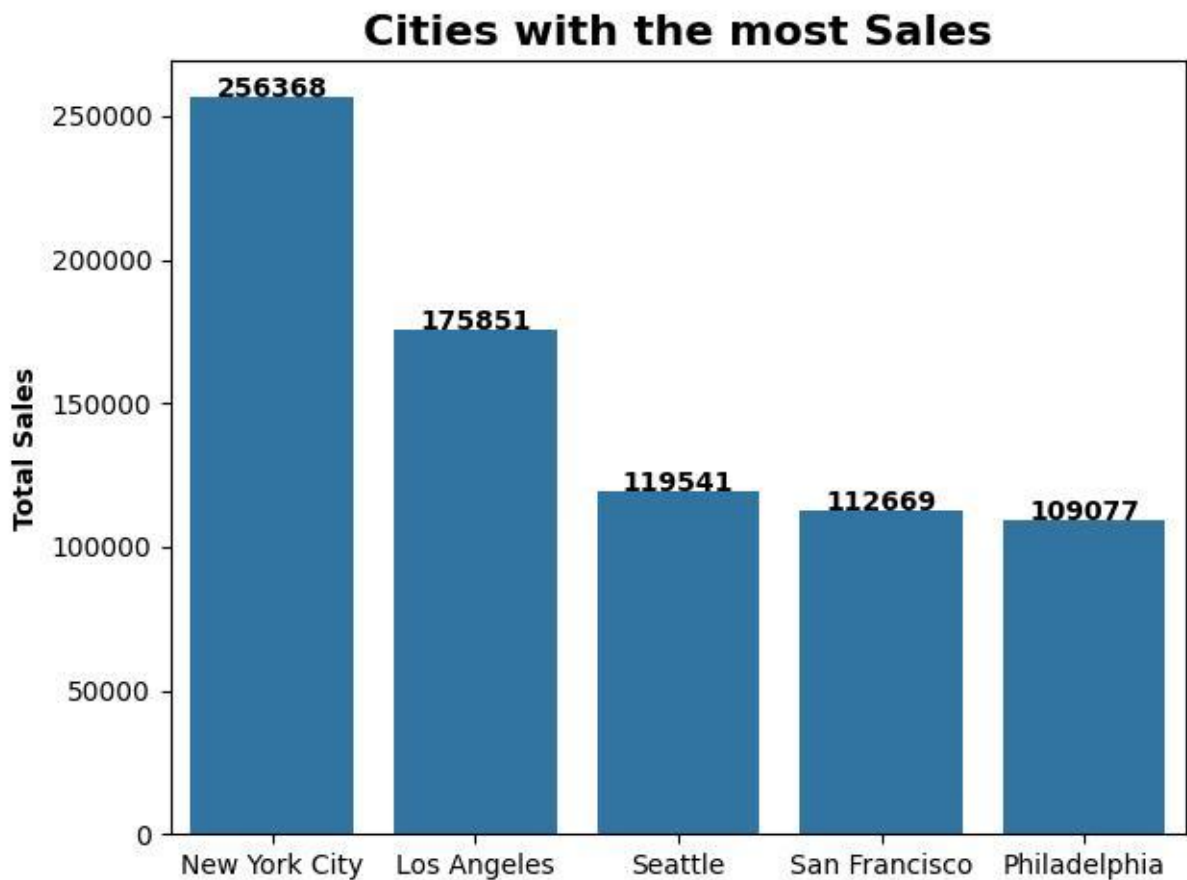

- Here top 5 customers with most sales for the superstore are listed.
- With Sean Miller had the most sales for the superstore company with a quite noticeable difference with the other customers ,whereas there isn't a very huge difference between the top 3 to top 5 customers.

❖ TOTAL SALES BY REGION :-

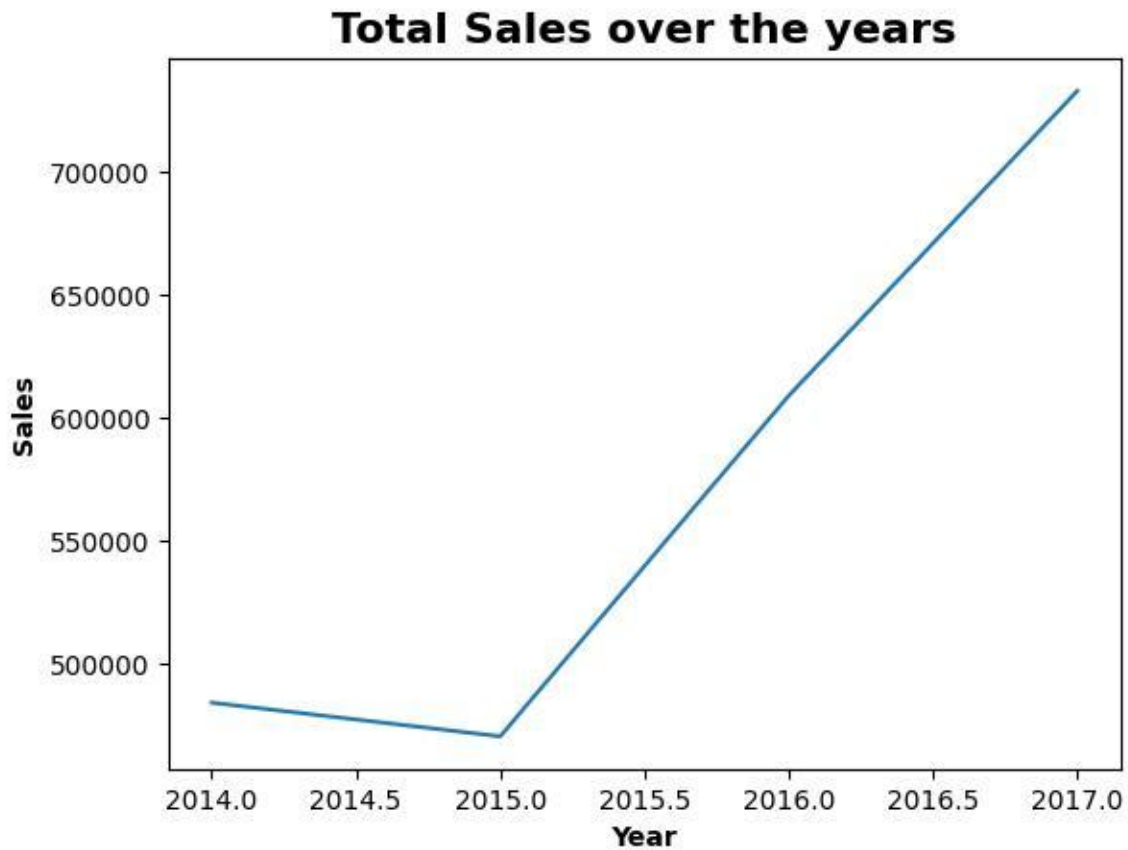

- Here the regions who were able to generate the most sales are given.
- The West and East region dominating the sales when compared with other region.

❖ TOP 5 CITIES WITH THE MOST SALES :-

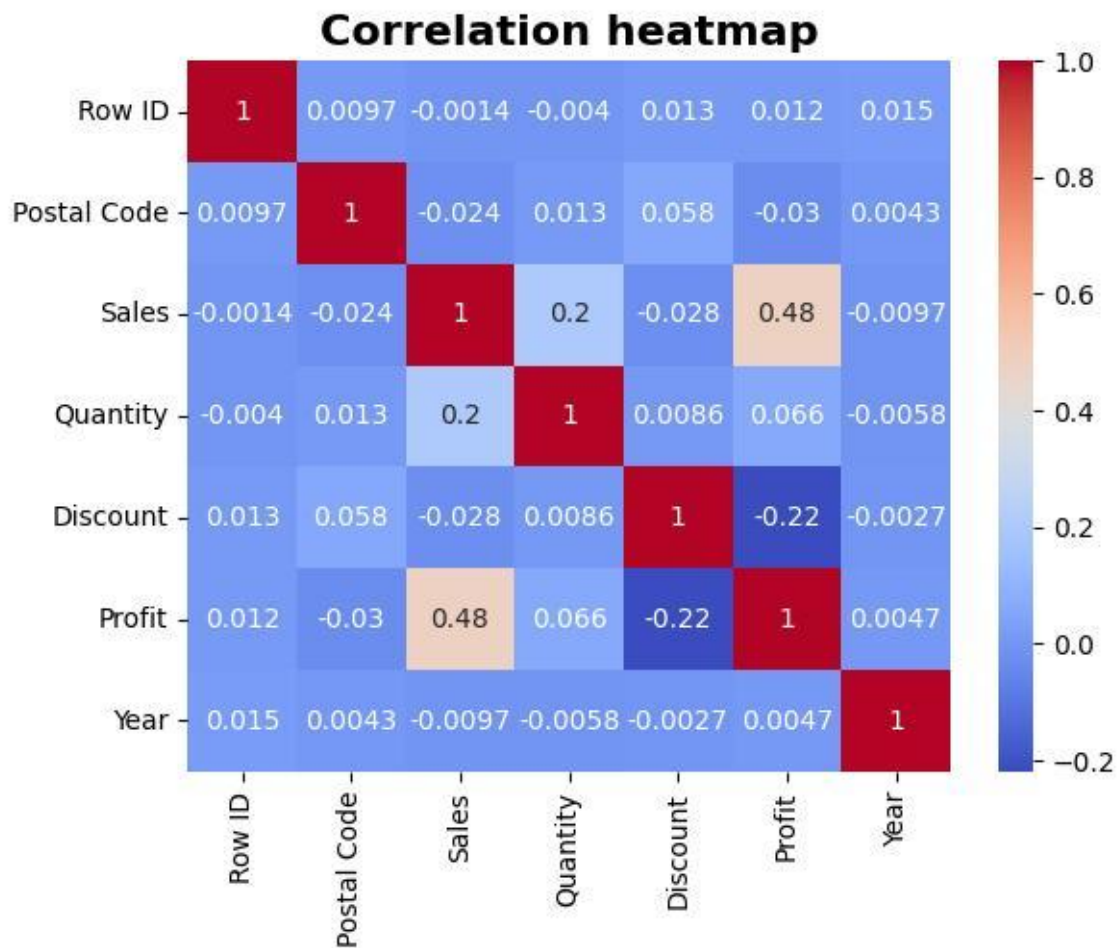

- Here the top 5 cities with the most sales are given.
- The New York city have made the most sales when compared with other cities with a noticeable difference.

❖ TOTAL SALES OVER THE YEARS :-

- Here a trend graph is made through which we can understand the sales pattern over the years.
- After 2015 a huge growing spike in the sales could be seen indicating there have been a significant growth in the sales after 2015.

❖ CORRELATION HEATMAP :-

- Here a correlation heatmap is shown to show the correlation between all the numeric values.
- Through this graph we can understand the relation and their dependency on other variables.

CONCLUSION:-

An analysis was made on the superstore dataset to understand which product, region, category, cities etc were able to generate most sales for the company. Through this study the company can understand in which segments they are leading and in which segment they need to improve. A line graph to indicate the sales over the year shown there is a growing sales after 2015 which shows there is positive sales occurring for the company over the years. For this study bar charts, line chart and pie chart were used in order to analyse the dataset. Overall the EDA project helped me understand how data visualization makes it easier to analyse business models and identify meaningful patterns.
